## **Subject Description Form**

Subject Code	EIE4100	
Subject Title	Computer Vision and Pattern Recognition	
Credit Value	3	
Level	4	
Pre-requisite / Co-requisite/ Exclusion	For 42477: EIE2106 Signal and System Analysis and EIE3103 Digital Signals and Systems	
Objectives	<ol> <li>To introduce students the fundamentals of image formation;</li> <li>To introduce students the major ideas, methods, and techniques of computer vision and pattern recognition;</li> <li>To develop an appreciation for various issues in the design of computer vision and object recognition systems; and</li> <li>To provide the student with programming experience from implementing computer vision and object recognition applications.</li> </ol>	
Intended Subject Learning Outcomes	Upon completion of the subject, students will be able to:  Category A: Professional/academic knowledge and skills  Comprehend the fundamentals of image formation.  Comprehend the major ideas, methods, and techniques of image processing and computer vision.  Appreciate typical pattern recognition techniques for object recognition.  Implement basic image processing and computer vision techniques.  Develop simple object recognition systems.  Category B: Attributes for all-roundedness  Present ideas and findings effectively.  Think critically.	
Subject Synopsis/ Indicative Syllabus	<ul> <li>Syllabus:         <ul> <li>Image Formation and Image Models                 Radiometry; Sources, Shadows and Shading; Colour; Cameras.</li> <li>Early Vision with One Image                 Linear Filters; Edge Detection; Texture; Digital Libraries.</li> </ul> </li> <li>Early Vision with Multiple Images         <ul> <li>The Geometry of Multiple Views; Stereopsis.</li> </ul> </li> <li>Mid-Level Vision         <ul> <li>Segmentation and Fitting; Tracking with Linear Dynamic Models.</li> </ul> </li> <li>High-Level Vision         <ul> <li>Correspondence and Pose; Registration in Medical Imaging Systems.</li> </ul> </li> <li>Finding Templates Using Classifiers         <ul> <li>Classifiers; Building Classifiers from Class Histograms; Feature Selection.</li> </ul> </li> <li>Category-Level Recognition         <ul> <li>Current Approaches to Object Recognition; Decision Trees; Nearest Neighbour Rule (NNR); Support Vector Machine; Artificial Neural Networks; Deep Learning.</li> </ul> </li> </ul>	

## Teaching/Learning Lectures: Methodology 1. fundamental principles and key concepts of the subject are delivered to students: guidance on further readings, applications and implementation is given. Tutorials: 1. supplementary to lectures and are conducted with a smaller class size: 2. students will be able to clarify concepts and to have a deeper understanding of the lecture material; 3. problems and application examples are given and discussed Laboratory sessions: 1. students will make use of the software tools to construct simple computer vision applications. Assessment Specific % **Intended Subject Learning Outcomes** Methods in Weighting to be Assessed (Please tick as Assessment Alignment with Methods/Tasks appropriate) **Intended Subject Learning Outcomes** 1 2 3 4 5 7 6 1. Continuous Assessment (total: 45%) ✓ ✓ ✓ Tests 25% Assignments 10% Lab exercises 10% and lab ✓ ✓ reports ✓ 2. Examination 55% Total 100%

## **Student Study Effort Expected**

Class contact (time-tabled):	
Lecture	24 Hours
Tutorial/Laboratory/Practice Classes	15 hours
Other student study effort:	
Lecture: preview/review of notes; homework/assignments; preparation for test/quizzes/examination	36 Hours
Tutorial/Laboratory/Practice Classes: preview of materials, revision and/or reports writing	30 Hours
Total student study effort:	105 Hours

8
